Heli-Transportable Heat Exchangers

Airpac Bukom can offer highly mobile steam generator and heat exchanger packages enabling operations in difficult to access locations.

Our 10,000 psig heli-transportable steam heat exchangers weigh less than 5000 Kgs to enable transportation by helicopter. The heat exchanger manifold is transported as a separate lift unit weighing 3500 Kgs.

The equipment has been successfully utilised on a number of projects in isolated locations, including well test projects in the jungles of South America.

Features

- Highly mobile package for difficult to access locations
- Modular design enables the system to be configured to meet specific client requirements
